Customer Reviews

This book is great to supplement instruction as we shift focus to Common Core Standards. The book is broken down into 4 short daily sections of problems and a 5th day review of concepts check. These are great to use in centers, or quiet work when students have completed an assignment ahead of the rest of the class. They are also short enough to use in lieu of your morning message, and to send as additional home support. What I love MOST about this book, is the Common Core Standards Alignment Matrix at the beginning of the book that breaks down which standards the children are working on for that week. You can quickly see which standards may need additional support on an individual and whole class level. I bought this and the [Common Core Language Arts](#)

4 Today, Grade 2: Daily Skill Practice (Common Core 4 Today) and love both.

Oddly simple math for what is supposed to be 2nd grade. My son performs at about grade level in math and I purchased this thinking it was a summer bridge workbook. I'm not sure if the simplicity of the book speaks more to higher expectations of our personal district, inaccurately low expectations of the author or lowered expectations of Common Core-as I am not an elementary school teacher.

Common Core is the buzzword now for education, and I bought this as a supplement to my first graders homework for the December break. The worksheets supposedly feature the criteria that the CC is going to use. In a practical sense, these are not great worksheets. They require an adult to read the instructions because each page has lengthy instructions that are far above grade level reading. I was hoping I could hand him a worksheet each day and have him work on it while I cook nearby (like other workbooks at his level). Not so with this one. Also, the problems are in a small font with a very small space for answers. First-graders typically draw and write much larger than a tiny space that is shown. So it's practically impossible to use, because the lengthy questions don't leave the room needed.

I use this every day with my second graders. I pass them out on Monday and each day the students do one section (4 problems). On Friday they flip it over and do the assessment on the back. It's a great way to review prior concepts and stay on top of misunderstandings. Highly recommend.

I'm using this to keep my grandson's math skills from falling behind over the summer months. Math isn't his strong subject and he doesn't care for it at all. This provides some quick, fairly painless, exercises to keep him on track.

Bought these for my son because I can't help him with the core curriculum and he's not getting the repetition needed to learn it in school. He enjoys working through the worksheets and I can see that he knows the concepts...something I can't determine with the worksheets the school sends home. If you're like me (a smart, educated adult who is befuddled by the core curriculum) consider buying these. Your child will work through 4 questions a day for 4 days and an assessment on day 5. I have a hard time limiting my son to only 4 questions a day...he loves working through these worksheets that much!

Got this for my second grade classroom. Great for morning work, spiral review, and even some frontloading. Best part is that I can get 4 days work on 1 sheet of paper. I found that it is just the right amount of work for students to do when they walk into the classroom. The work gets harder as the weeks go by so but it also goes back and reviews what it has already covered.

Good book for extra work for my son who sometimes doesn't get enough homework from public schools. I wish he didn't need it but he does. We did a week per sitting as it was review for him and we were gearing up for a standardized test.
