Subjective Time: The Philosophy, Psychology, And Neuroscience Of Temporality (MIT Press)
Our awareness of time and temporal properties is a constant feature of conscious life. Subjective temporality structures and guides every aspect of behavior and cognition, distinguishing memory, perception, and anticipation. This milestone volume brings together research on temporality from leading scholars in philosophy, psychology, and neuroscience, defining a new field of interdisciplinary research. The book's thirty chapters include selections from classic texts by William James and Edmund Husserl and new essays setting them in historical context; contemporary philosophical accounts of lived time; and current empirical studies of psychological time. These last chapters, the larger part of the book, cover such topics as the basic psychophysics of psychological time, its neural foundations, its interaction with the body, and its distortion in illness and altered states of consciousness.

This is a magnificent, authoritative text covering every aspect of temporal experience from multiple angles. Refreshingly interdisciplinary, with all the best people in their respective fields. I am assigning selections in my own college course on the philosophy of time. Contains tons of fascinating material for academics and non-academics alike. Anyone interested in time and the human experience of time should definitely check it out.
